

UEFI & EDK II Training

How to Write a UEFI Application – Linux Lab

tianocore.org

See also LabGuide.md for Copy & Paste examples in labs

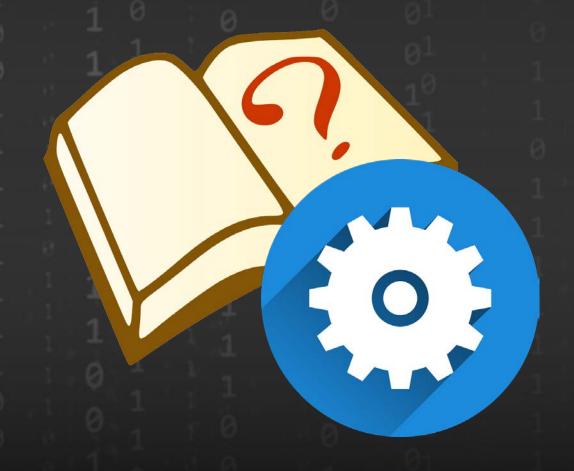

Lesson Objective

- Simple UEFI Application
- Add functionality to UEFI Application
- Using EADK with UEFI Application

Lab 2: Write a Simple UEFI Applications

In this lab, you'll learn how to write simple UEFI applications.

LAB 2 Writing a Simple UEFI Application

In this lab, you'll learn how to write simple UEFI applications.

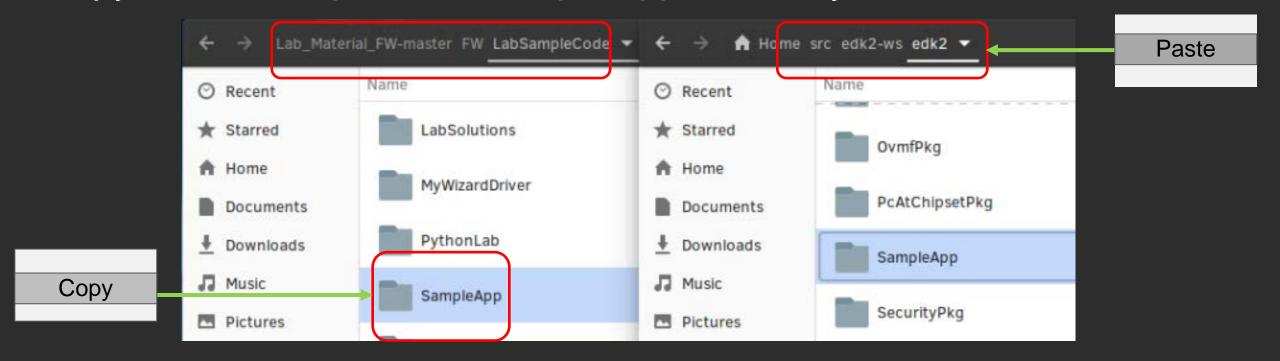

"C" file

- What goes into a Simplest "C"
- Start with what should go into the Simplest .INF file

Application Lab -start with .c and .inf template

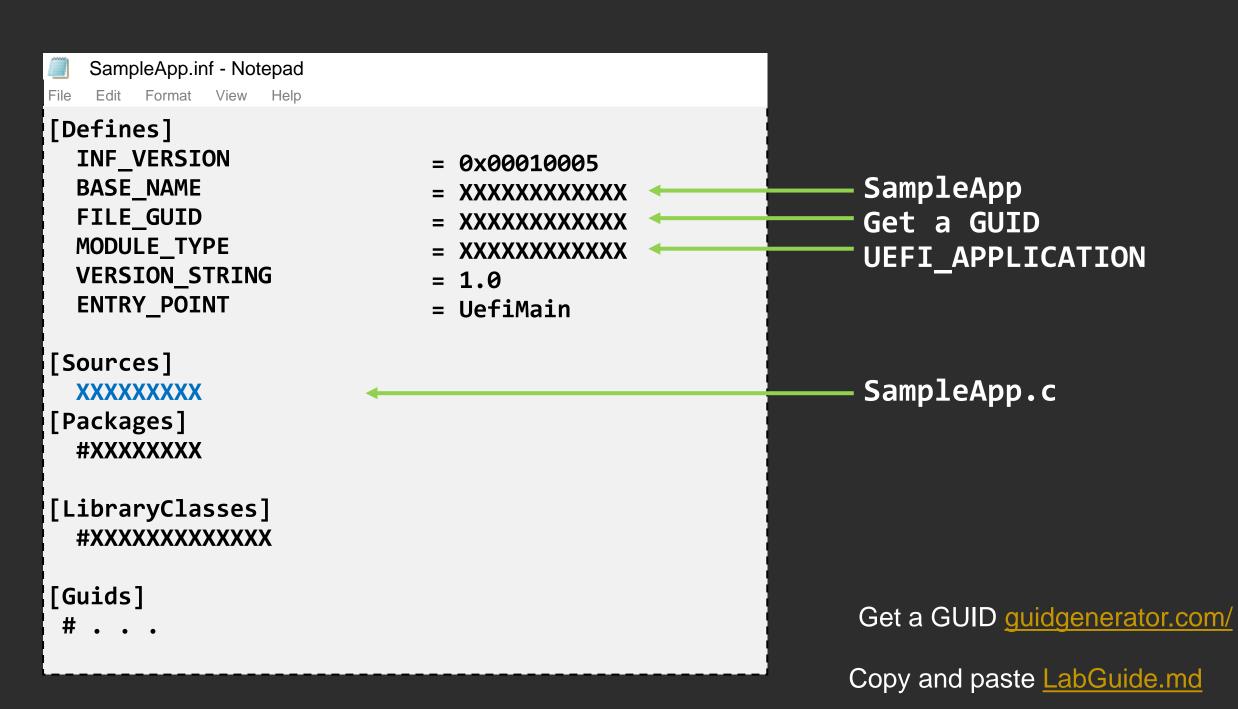

1. Copy the LabSampleCode/SampleApp directory to ~/src/edk2-ws/edk2

- 2. Edit SampleApp.inf
 - Look in the INF for "xxxxxxxxxxxx" sections that will need information
 - Create Name & GUID, and then fill in the MODULE_TYPE

Lab 2: Sample Application INF file

6

Lab 2: Sample Application 'C' file

```
SampleApp.c - Notepad
 Edit Format View Help
/** @file
  This is a simple shell application
**/
EFI_STATUS
EFIAPI
UefiMain (
  IN EFI_HANDLE
                          ImageHandle,
  IN EFI_SYSTEM_TABLE *SystemTable
  return EFI_SUCCESS; <</pre>
```

Does not do anything but return Success

Lab 2: Will it compile now?

Not yet ...

- 1. Need to add headers to the .C file
- 2. Need to add a reference to INF from the platform DSC
- 3. Need to add a few Package dependencies and libraries to the .INF

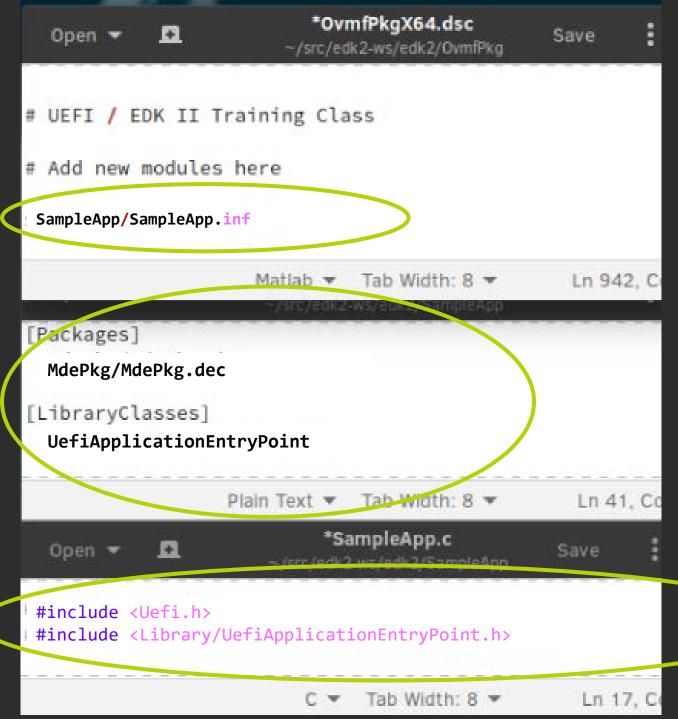

Application Lab – Update Files

- 1. .DSC (OvmfPkg/OvmfPkgX64.dsc)
 [Components . . .]
 Add INF to components section, before build options
 Hint: add after comment: # Add new modules here
 SampleApp/SampleApp.inf
- 2. .INF File (SampleApp/SampleApp.inf)
 Packages (all depend on MdePkg)
 [Packages]
 MdePkg/MdePkg.dec
 [LibraryClasses]
 UefiApplicationEntryPoint
- 3. .C file Header references File (SampleApp/SampleApp.c)
 #include <Uefi.h>
 #include <Library/UefiApplicationEntryPoint.h>

Lab 2: Lab cont. Solution

OvmfPkg/OvmfPkgX64.dsc

SampleApp/SampleApp.inf

SampleApp/SampleApp.c

Lab 2: Will it compile now?

Yes, Build SampleApp – Cd to ~/src/edk2-ws/edk2 directory

```
bash$ build -D ADD_SHELL_STRING
```

Copy SampleApp.efi to hda-contents

```
bash$ cd ~/run-ovmf/hda-contents
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/X64/SampleApp.efi .
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the shell

```
Shell> SampleApp
Shell>
```

Notice that the program will immediately unload because the main function is empty

Exit QEMU

Error on SampleApp.inf

```

The SampleApp.inf section [LibraryClasses] did not reference UefiApplicationEntryPoint

Error at the Shell prompt

```
Press ESC in 4 seconds to skip startup.nsh or any other key to continue.

2.0 Shell> SampleApp
'SampleApp' is not recognized as an internal or external command, operable program, or script file.

2.0 Shell> FSO:

2.0 FSO:\> LS SampleApp.efi
Error. No matching files were found.

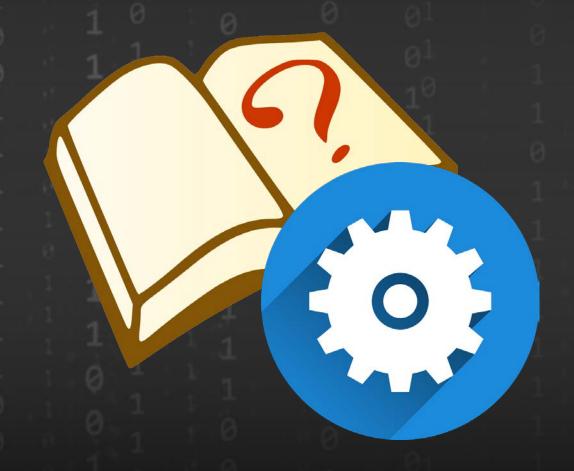

2.0 FSO:\> _
```

Ensure the SampleApp.inf BaseName is SampleApp

Lab 2.1: Build Switches

In this lab, you'll change the build switch ADD_SHELL_STRING to be always TRUE

Build MACRO Switches

The build for OvmfPkg is using build MACRO Switch:

-D ADD_SHELL_STRING — used to change a string in the UEFI Shell application, only used for EDK II Training (requires ShellPkg be re-built on a change of this switch) Edit ~/src/edk2-ws/edk2/OvmfPkg/OvmfPkgX64.dsc

```
Open The Common Save - + X

# For UEFI / EDK II Training
# This flag is to enable a different ver string for building of the ShellPkg
# These can be changed on the command line.
#

DEFINE ADD_SHELL_STRING = FALSE
```

Lab 2.1: Compiling w/out Build Switch

Build SampleApp without the –D Switch

bash\$ build

Copy OVMF.fd to run-ovmf

```
bash$ cd ~/run-ovmf/
bash$ cp ~/src/Build/OvmfX64/DEBUG_GCC5/FV/OVMF.fd bios.bin
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Shell> ver
UEFI Interactive Shell v2.2
EDK II
UEFI v2.70 (EDK II, 0x00010000)
Shell>

Check the Shell Version with the "Ver" command

NOTE: First delete directory Build/OvmfPkgX64/DEBUG_GCC5/X64/ShellPkg Exit QEMU

Lab 2.1: Compiling with Build Switch

Build SampleApp with the –D Switch

```
bash$ build -D ADD_SHELL_STRING
```

Copy OVMF.fd to run-ovmf

```
bash$ cd ~/run-ovmf/
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/FV/OVMF.fd bios.bin
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

```
Shell> ver
UEFI Interactive Shell v2.2 -From ADD_SHELL_STRING Switch
EDK II
UEFI v2.70 (EDK II, 0x00010000)
Shell> _
```

Check the Shell Version with the "Ver" command – see the differences Exit QEMU

Lab 2.1: Compiling w/out Build Switch

Edit the file ~/src/edk2-ws/edk2/OvmfPkg/OvmfPkgX64.dsc Change the DEFINE ADD_SHELL_STRING = FALSE to "TRUE" (appx. Line 31)

Build again

bash\$ build

Copy OVMF.fd to run-ovmf

```
bash$ cd ~/run-ovmf/
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/FV/OVMF.fd bios.bin
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

```
Shell> ver
UEFI Interactive Shell v2.2 -From ADD_SHELL_STRING Switch
EDK II
UEFI v2.70 (EDK II, 0x00010000)
Shell> _
```

Check the Shell version with "Ver" command Exit QEMU

Knowledge Check from LAB 2

- 1. How to write a simple native UEFI Application
- 2. Each module requires a .inf file with a unique GUID (use http://www.guidgenerator.com/)
- 3. The module created will be the base name defined in the .inf file
- 4. The module's .inf file is required to be included in the platform .dsc file
- 5. The [Packages] section is required at minimum to include MdePkg/MdePkg.dec
- 6. When using a Build Switch (-D) on the command line it overrides the value in the .DSC file
- 7. If it is a Library is getting updated, it is required to Build clean or delete the previous built module(s) including the library depending on what is getting rebuilt.

Lab 2: If there are build errors ...

See class files for the solution

- •...FW/LabSampleCode/LessonB.2
- Copy the .inf and .c files to ~src/edk2-ws/edk2/SampleApp
- Search sample DSC for reference to SampleApp.inf and add this line to your workspace DSC file ~src/edk2-ws/edk2/0vmfPkg/0vmfPkgX64.dsc

Invoke build again and check the solution

ADD FUNCTIONALITY

Add Functionality to the Simple UEFI Application:
Next 3 Labs

Lab 3: Print the UEFI System Table

Lab 4: Wait for an Event

Lab 5: Create a Simple Typewriter function

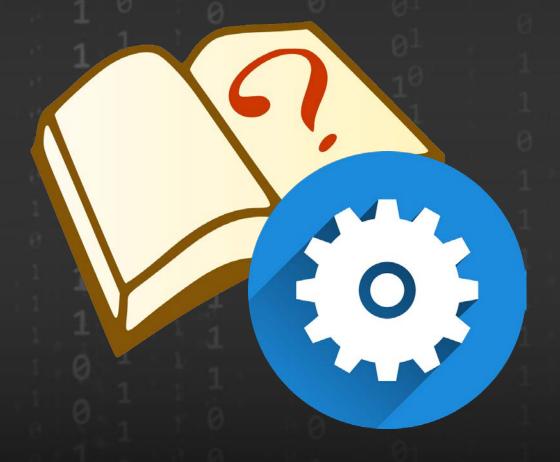

Solutions in .../FW/LabSampleCode/LabSolutions/LessonB.n

24

Lab 3: Print the UEFI System Table

Add code to print the hex address of the EFI System Table pointer to the console.

Lab 3: Add System Table Code

Add code to print to the console the hex address of the system table pointer

- Where is the "print" function?
- Where does the app get the pointer value?
 (compared to **mem** command below)

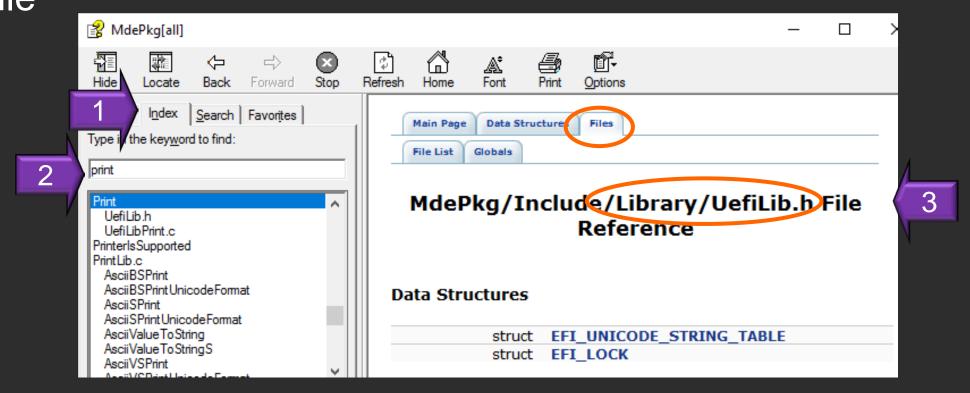

```
Valid EFI Header at Address 0000000007E34018
System: Table Structure size 00000078 revision 0002003C
ConIn (000000007CB0550) ConOut (000000006EEEB20) StdErr (000000007CB0310)
Runtime Services 0000000007E34B98
Boot Services
                0000000007EC8480
SAL System Table 00000000000000000
ACPI Table
                0000000007E40000
ACPI 2.0 Table 0000000007E40014
MPS Table
                 00000000000000000
SMBIOS Table
                 0000000007E12000
Shell> sampleapp
System Table: 0x07E34018
Shell>
```

Lab 3: Locating the Print() Function

- 1. Search the MdePkg.chm and find that the Print function by clicking on the "Index" tab
- 2. Type "Print" and double click

3. Scroll to the top in the right window to see that the print function is in the UefiLib.h file

^{*} NOTE: Install a CHM Viewer for Ubuntu - Clear Linux* Project See link for .chm viewer bash\$ sudo aptitude install kchmviewer

27

Lab 3: Modifying .C & .INF Files

```
SampleApp.inf
                   SampleApp.c
Open ▼ +
                                      Save
                                                                        ~/src/edk2-ws/edkw/SampleApp
             ~/src/edk2-ws/edk2/SampleApp
SampleApp.c
                                                            SampleApp.inf
#include <Uefi.h>
                                                            [LibraryClasses]
#include <Library/UefiApplicationEntryPoint.h>
                                                              UefiApplicationEntryPoint
#include <Library/UefiLib.h>
                                                              UefiLib
EFI_STATUS
EFIAPI
UefiMain (
  IN EFI HANDLE
                         ImageHandle,
  IN EFI_SYSTEM_TABLE *SystemTable
  Print(L"System Table: 0x%p\n", SystemTable);
  return EFI_SUCCESS;
```

Note: Solution files are in the lab materials directory

Lab 3: Build and Test SampleApp

Build SampleApp - Cd to ~/src/edk2-ws/edk2 directory

bash\$ build

Copy SampleApp.efi to hda-contents

```
bash$ cd ~/run-ovmf/hda-contents
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/X64/SampleApp.efi .
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the shell

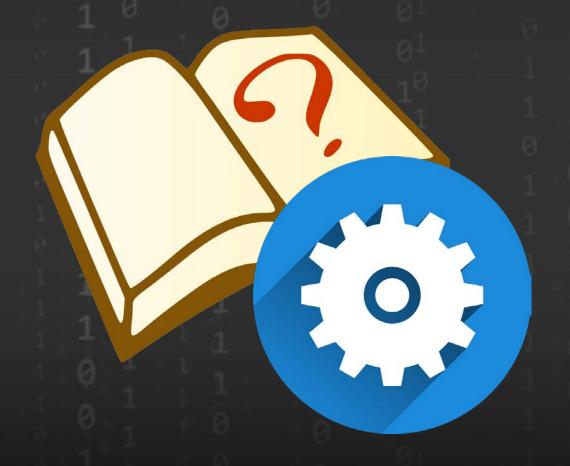

```
Shell> SampleApp
System Table: 0x07E34018
```

Exit QEMU

Lab 4: Waiting for an Event

In this lab, you'll learn how to locate code and .chm files to help write EFI code for waiting for an event

Lab 4: Add Wait for Event

Add code to make your application wait for a key press event (WaitForEvent / WaitForKey)

```
Press ESC in 5 seconds to skip startup.nsh, any other key to continue.

Shell> SampleApp
System Table: 0x04C03F90

Press any Key to continue:
```

- Where are these functions located?
- What else can you do with the key press?

Lab 4: HOW?

Locate Functions: WaitForEvent / WaitForKey

- Search MdePkg.chm- "MdePkg Document With Libraries.chm" located in ...
 Lab_Material_FW/FW/Documentation
 - Locate WaitForEvent in Boot Services
 - Locate WaitForKey and find (
 EFI_SIMPLE_TEXT_INPUT_PROTOCOL will be part of ConIn)
- Check the <u>UEFI Spec</u> for parameters needed:
 - WaitForEvent is referenced via Boot Services pointer, which is referenced via EFI System Table
 - WaitForKey can be referenced through the EFI System Table passed into the application
- OR Search the working space for WaitForEvent for an example
- One can be found in MdePkg/Library/UefiLib/Console.c ~ In 569:

Lab 4: Update the C File for WaitForKey

Search the work space and find the following MdePkg/Library/UefiLib/Console.c ~ In 563:

```
Console.c(~/src/edk2-ws/edk2/MdePkg/Library/UefiLib)-gedit
                                                                          Save
    UINTN
                             EventIndex;
                                                                               Line 410
     // If we encounter error, continue to read another key in.
       if (Status != EFI_NOT_READY) {
        continue;
      gBS->WaitForEvent (1, &gST->ConIn->WaitForKey, &EventIndex);
                                                                               Line 563
Add the following to SampleApp.c
SampleApp.c(~/src/edk2-ws/edk2/SampleApp)-gedit
                                                                         Save
                                                                                 Copy and Paste
 UTNTN
                                EventIndex;
 Print(L"System Table: 0x%p\n",SystemTable);
 Print(L"\nPress any Key to continue : \n");
 gBS->WaitForEvent (1, &gST->ConIn->WaitForKey, &EventIndex);
```

www.tianocore.org

Lab 4: Test Compile

However, this won't compile ... gBS and gST are not defined.

```
/SampleApp.c
/home/u-uefi/src/edk2/SampleApp/SampleApp.c: In function 'UefiMain':
/home/u-uefi/src/edk2/SampleApp/SampleApp.c:42:3: error: 'gBS' undeclared (first use in this function)

gBS->WaitForEvent (1, &gST->ConIn->WaitForKey, &EventIndex);

/home/u-uefi/src/edk2/SampleApp/SampleApp.c:42:3: note: each undeclared identifi er is reported only once for each function it appears in
/home/u-uefi/src/edk2/SampleApp/SampleApp.c:42:26: error: 'gST' undeclared (first use in this function)

gBS->WaitForEvent (1, &gST-)ConIn->WaitForKey, &EventIndex);

GNUmakefile:376: recipe for target '/home/u-uefi/src/edk2/Build/OvmfX64/DEBUG_GC C5/X64/SampleApp/SampleApp/OUTPUT/SampleApp.obj' failed
make: *** [/home/u-uefi/src/edk2/Build/OvmfX64/DEBUG_GCCS/X64/SampleApp/SampleApp.p/OUTPUT/SampleApp.obj] Error 1
```

Search the MdePkg.chm for "gBS" and "gST" – they are located in UefiBootServicesTableLib.h

```
Add the boot services lib to SampleApp.c ... #include <Library/UefiBootServicesTableLib.h>
```

(hint: Lesson B.4 has the solution)

Lab 4: Update for gBS & gST

```
SampleApp.c
Open ▼ 🕂
                        ~/src/edk2-ws/edk2/SampleApp
#include <Uefi.h>
#include <Library/UefiApplicationEntryPoint.h>
#include <Library/UefiLib.h>
#include <Library/UefiBootServicesTableLib.h>
// . . .
EFI_STATUS
EFIAPI
UefiMain (
 IN EFI_SYSTEM_TABLE *SystemTable
                      EventIndex;
 UINTN
 Print(L"System Table: 0x%p\n", SystemTable);
 Print(L"\nPress any Key to continue :\n");
 gBS->WaitForEvent (1, &gST->ConIn->WaitForKey, &EventIndex);
 return EFI SUCCESS;
```

Lab 4: Build and Test SampleApp

Build SampleApp - Cd to ~/src/edk2-ws/edk2 directory

bash\$ build

Copy SampleApp.efi to hda-contents

```
bash$ cd ~/run-ovmf/hda-contents
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/X64/SampleApp.efi .
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the shell

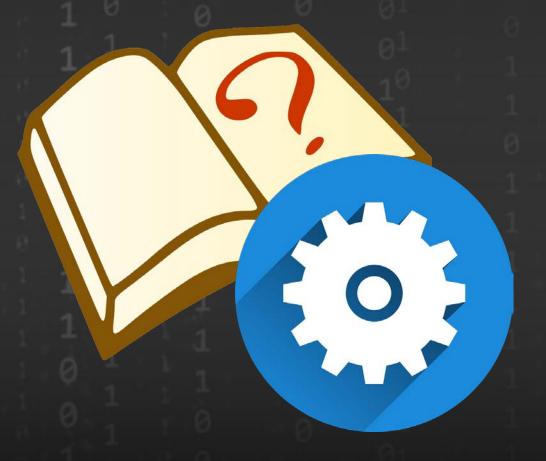

```
Shell> SampleApp
System Table: 0x07E34018
Press any key to continue:
```

Notice that the SampleApp will wait until a key press to continue. Exit QEMU

Lab 5: Creating a Simple Typewriter Function

In this lab, you'll learn how to create a simple typewriter function that retrieves the keys you type and subsequently prints each one back to the console

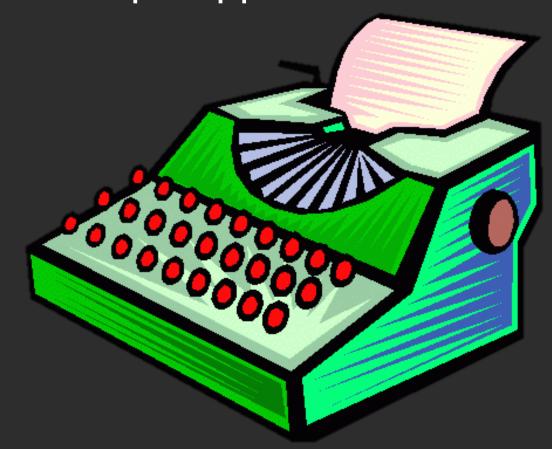

Lab 5: Typewriter Function

Create a Simple Typewriter Function using the SampleApp from Lab 4

Requirements:

- Retrieve keys entered from keyboard (Like Lab 4)
- Print back each key entered to the console
- To exit, press "." (DOT) and then <Enter>

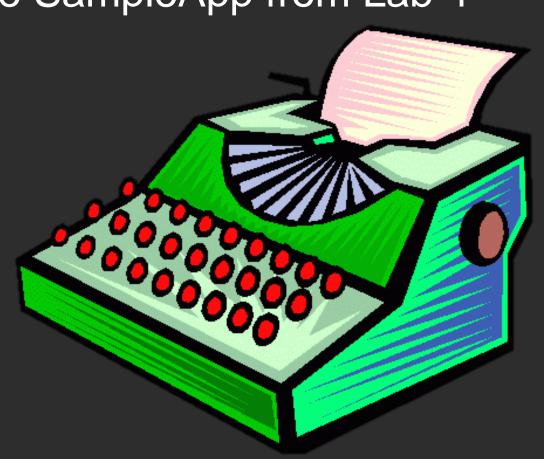

Lab 5: Typewriter Function

Create a Simple Typewriter Function using the SampleApp from Lab 4

How:

- 1. Add a Loop using WaitForEvent with WaitForKey
- 2. Use the ReadKeyStroke function from ConIn
- 3. Print back each key to console
- 4. Exit when DOT "." character is followed by an <Enter> key

Lab 5: How Process (Hints)

Use the same procedure as with Lab 4 to find "ReadKeyStroke" in the workspace: MdePkg/Library/UefiLib/Console.c ~ In 552

```
Status = gST->ConIn->ReadKeyStroke (gST->ConIn, Key);
```

ReadKeyStroke uses buffer called EFI_INPUT_KEY ~ In 393

```
OUT EFI_INPUT_KEY *Key,
```

- TIP: Good Idea to zero out a buffer in your function
 - Use MdePkg.chm to find ZeroMem function
 - Use ZeroMem on your variable buffer "Key" of type EFI_INPUT_KEY
- Use Boolean flag "ExitLoop" to exit your loop once the user enters a DOT "." character.

Lab 5: Solution

```
Save
 Open ▼
                   ~/src/edk2-ws/edk2/SampleApp
#include <Uefi.h>
#include <Library/UefiApplicationEntryPoint.h>
#include <Library/UefiLib.h>
#include <Library/BaseMemoryLib.h>
#include <Library/UefiBootServicesTableLib.h>
#define CHAR DOT 0x002E // '.' in Unicode
EFI STATUS
EFIAPI
UefiMain (
  IN EFI HANDLE
                  ImageHandle,
  IN EFI SYSTEM TABLE *SystemTable
                 EventIndex;
 UINTN
  BOOLEAN
                 ExitLoop;
  EFI INPUT KEY
                 Key;
// Lab 3
 Print(L"System Table: 0x%p\n",SystemTable);
//Lab 4
 Print( L"\nPress any Key to continue : \n\n"
 gBS->WaitForEvent (1, &gST->ConIn->WaitForKey, EventIndex);
```

SampleApp.c

(hint: Lesson B.5 has the solution)

```
// Lab 5
 Print(L"Enter text. Include a dot ('.') in a \
     sentence then <Enter> to exit:\n\n");
 ZeroMem (&Key, sizeof (EFI INPUT KEY));
 gST->ConIn->ReadKeyStroke (gST->ConIn, &Key);
 ExitLoop = FALSE;
 do {
       gBS->WaitForEvent (1, &gST->ConIn->WaitForKey,
             &EventIndex);
       gST->ConIn->ReadKeyStroke (gST->ConIn, &Key);
       Print(L"%c", Key.UnicodeChar);
       if (Key.UnicodeChar == CHAR DOT){
             ExitLoop = TRUE;
    } while (!(Key.UnicodeChar == CHAR LINEFEED
       Key.UnicodeChar == CHAR CARRIAGE RETURN) | |
       !(ExitLoop));
 Print(L"\n");
 return EFI SUCCESS;
```

Lab 5: Solution

SampleApp.c Should have the following for Lab 5:

```
#include <Uefi.h>
#include <Library/UefiApplicationEntryPoint.h>
#include <Library/UefiLib.h>
#include hrary/HefiBootServicesTableLib h>
#include <Library/BaseMemoryLib.h>
#define CHAR_DOT 0x002E // '.' in Unicode
EFI STATUS
EFIAPI
UefiMain (
 IN EFI HANDLE ImageHandle,
 IN EFI SYSTEM TABLE *SystemTable
               EventIndex;
 UINTN
                ExitLoop;
 BOOLEAN
 EFI INPUT KEY Key;
 / Lab 3
 Print(L"System Table: 0x%p\n",SystemTable);
//Lab 4
 Print( L"\nPress any Key to continue : \n\n");
 gBS->WaitForEvent (1, &gST->ConIn->WaitForKey,
```

```
// Lab 5
 Print(L"Enter text. Include a dot ('.') in a sentence then
<Enter> to exit:\n\n");
 ZeroMem (&Key, sizeof (EFI_INPUT_KEY));
 gST->ConIn->ReadKeyStroke (gST->ConIn, &Key);
 ExitLoop = FALSE;
 do {
       gBS->WaitForEvent (1, &gST->ConIn-
>WaitForKey,&EventIndex);
       gST->ConIn->ReadKeyStroke (gST->ConIn, &Key);
      Print(L"%c", Key.UnicodeChar);
       if (Key.UnicodeChar == CHAR_DOT){
           ExitLoop = TRUE;
    } while (!(Key.UnicodeChar == CHAR LINEFEED
       Key.UnicodeChar == CHAR_CARRIAGE_RETURN) | |
       !(ExitLoop));
 Print(L"\n");
 return EFI SUCCESS;
```

Lab 5: Build and Test SampleApp

```
Build SampleApp - Cd to ~/src/edk2-ws/edk2 dir
bash$ build
```

Copy SampleApp.efi to hda-contents

```
bash$ cd ~/run-ovmf/hda-contents
bash$ cp ~/src/edk2-ws/Build/OvmfX64/DEBUG_GCC5/X64/SampleApp.efi .
```

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the shell

```
Press any Key to continue :
Enter text. Include a dot ('.') in a sentence then <Enter> to exit:
This is text from the type writer function.
Shell>
```

Exit QEMU

Shell> sampleapp

System Table: 0x061CBF90

Bonus Exercise: Open Protocol Example

Write an Application using argv, argc parameters

- Captures command line parameters using Open Protocol
- Need to open SHELL_INTERFACE_PROTOCOL
- Note: Requires ShellPkg

Build SampleApp – Cd to ~/src/edk2-ws/edk2

Copy SampleApp.efi to hda-contents

Test by Invoking Qemu

Run the application from the shell

```
bash$ build
```

bash\$ cd ~/run-ovmf
bash\$. RunQemu.sh

Shell> SampleApp test1 test2

(hint: ~FW/LabSampleCode/ShellAppSample has the solution)

USING EADK

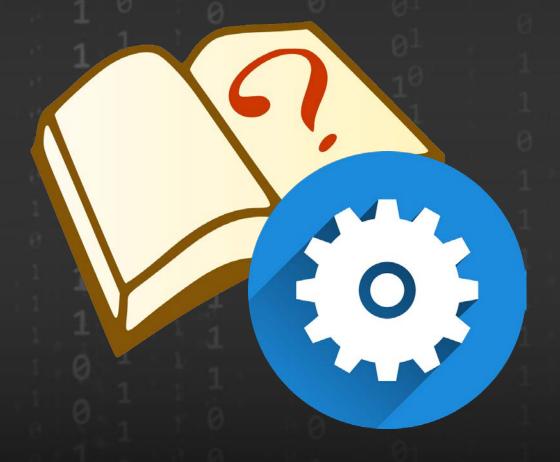

Using EADK with UEFI Application

Labs 6-7 are Optional

Lab 6: Writing UEFI Applications with EADK

In this lab, you'll write an application with the same functionality as SampleApp.c using LibC from the EDK II Application Development Kit (EADK)

Lab 6: With EDK II EADK

Write the same application with the same functionality as SampleApp.c using the LibC from the EADK

```
Shell> fs0:
FS0:\> SampleCApp
System Table: 0x631bf90

Press any Key and then <Enter> to continue:

Enter text. Include a dot ('.') in a sentence then <Enter> to exit:
This is a sentence using my UEFI Application using the C library.

FS0:\>
```

What libraries are needed

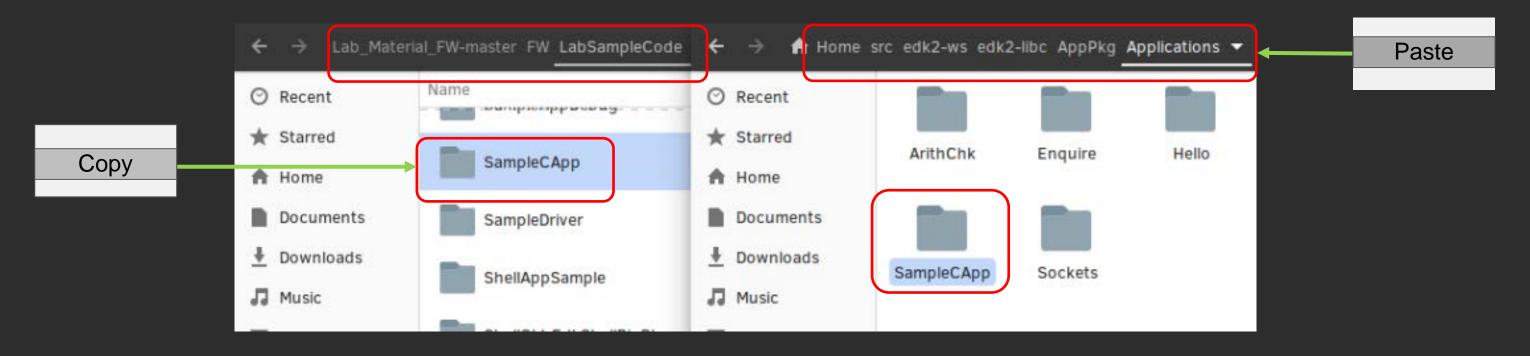

What differences are there using the LibC

Lab 6: EDK II using EADK

Start with the packages for EADK

- /edk2 AppPkg has directory Applications
- /edk2 StdLib contains the LibC libraries
- Copy and paste directory ~../FW/LabSampleCode/SampleCApp to ~src/edk2-libc/AppPkg/Applications/SampleCApp

Lab 6: EDK II using EADK

Check out AppPkg/Applications/SampleCApp

SampleCApp.c and SampleCApp.inf

```
SampleCApp.inf

                                                  [Packages]
                                                    StdLib/StdLib.dec
                                                    MdePkg/MdePkg.dec
                                                    ShellPkg/ShellPkg.dec
                                                  [LibraryClasses]
                                                    LibC
                                                    LibStdio
```

Lab 6: Update AppPkg.dsc

Edit the ~src/edk2-ws/edk-libc/AppPkg/AppPkg.dsc and add SampleCApp.inf at the end

- of the components section
- (hint: search for "#### Sample Applications")
- AppPkg/Applications/SampleCApp/SampleCApp.inf

```
[Components]
#### Sample Applications.
AppPkg/Applications/Hello/Hello.inf # No LibC includes or functions.
AppPkg/Applications/Main/Main.inf # Simple invocation. No other LibC function
AppPkg/Applications/Enquire/Enquire.inf #
AppPkg/Applications/ArithChk/ArithChk.inf #
AppPkg/Applications/SampleCApp/SampleCApp.inf # LAB 6
```

Lab 6: Build and Test SampleCApp

Build the AppPkg

bash\$ build -p AppPkg/AppPkg.dsc -m AppPkg/Applications/SampleCApp/SampleCApp.inf

Copy the built application to the run OVMF hda-contents directory

bash\$ cp Build/AppPkg/DEBUG_GCC5/X64/SampleCApp.efi ~/run-ovmf/hda-contents

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the New Shell

```
Shell> SampleCApp
Shell>
```

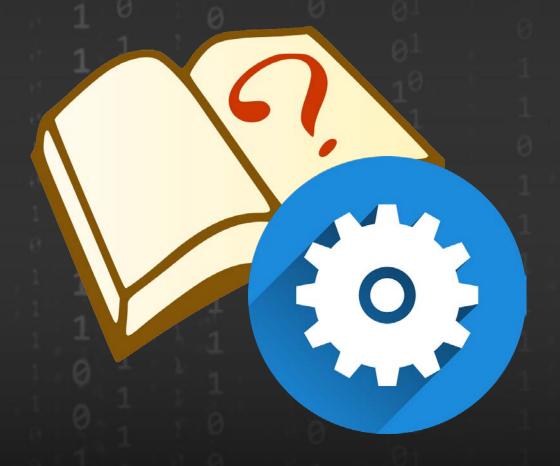

Exit QEMU

Notice that the program will immediately unload because the main function is empty

Lab 7: Adding Functionality to SampleCApp

In this lab, you'll add functionality to SampleCApp the same as in Lab 5. This lab will use EADK libraries, so the coding style is similar to standard C.

SampleCApp.c and

```
SampleCApp.c
                                         Save - + X
        -/src/edk2-ws/edk2-libc/AppPkg
#include <stdio.h>
#include <Library/UefiBootServicesTableLib.h>

                                                         MdePkg/MdePkg.dec
                                                         ShellPkg/ShellPkg.dec
   return 0;
                                                       [LibraryClasses]
                                                         LibC
                                                         lihStdia
```

Lab 7: Build and Test SampleCApp

Build the AppPkg

bash\$ build -p AppPkg/AppPkg.dsc -m AppPkg/Applications/SampleCApp/SampleCApp.inf

Copy the built application to the run OVMF hda-contents directory

bash\$ cp Build/AppPkg/DEBUG_GCC5/X64/SampleCApp.efi ~/run-ovmf/hda-contents

Test by Invoking Qemu

```
bash$ cd ~/run-ovmf
bash$ . RunQemu.sh
```

Run the application from the New Shell

```
Shell> SampleCApp
Press any Key and then <Enter> to Continue :

Enter text. Include a dot ('.') in a sentence then <Enter> to exit:
This is sample text.
Shell>
```

Summary

- Simple UEFI Application
- Add functionality to UEFI Application
- Using EADK with UEFI Application
